- **Dhruv Shrivastava — 25BAI11236**
- **Atharva Kulkarni — 25BAI10584**

Technology:

HTML • CSS • JavaScript

The Problem:

Every day, a large amount of safe and usable food is wasted by:

- Restaurants and hotels
- Hostels and cafeterias
- Households
- Events and functions
- Small food businesses

At the same time, NGOs and needy people struggle to access sufficient food.

Key Issue:

There is a lack of a fast and reliable platform that connects surplus food donors with organizations that can distribute it.

Food is available, but the right connection is missing.

Our Solution

FoodResQ is a community-focused technology platform that creates a simple bridge between surplus food donors and verified NGOs/nearby recipients.

FoodResQ enables:

- Surplus Food Reporting
- Donors can report available surplus food.
- Nearby Food Discovery
- Registered NGOs can discover available food nearby.
- NGO Registration & Verification
- NGOs can register and provide their organisational details for verification.
- Pick-up Coordination
- Claimed food can be collected by the registered NGO.

Our Core Concept:

Report → Discover → Claim → Pick-up → Redistribute

Key Features of FoodResQ:

1. Surplus Food Reporting

Donors can report surplus food with relevant information.

2. Nearby Availability

Registered NGOs can discover available surplus food nearby.

3. NGO Registration

NGOs can create their accounts and provide organisational details.

4. NGO Verification

Verification information helps establish trust between participants.

5. Login Security

Registered users can securely access their accounts.

6. Pick-up Coordination

Claimed food can be collected by the respective NGO.

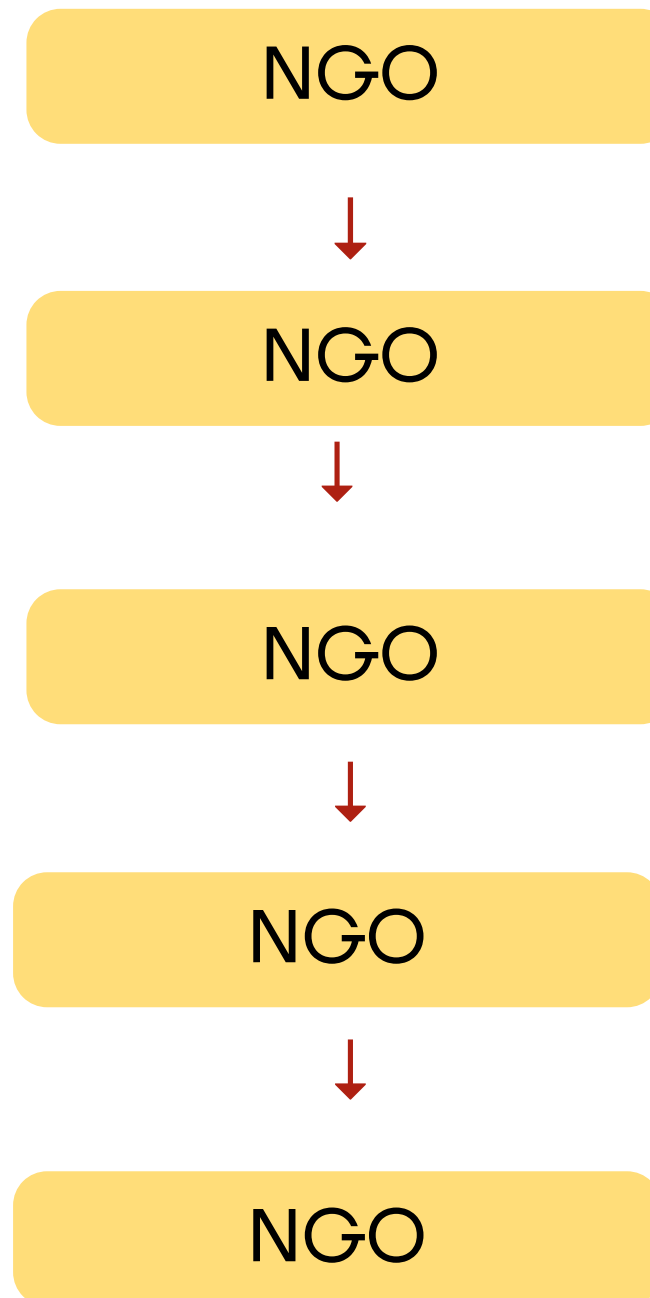

NGO Registration and Verification:

The NGO Registration Page allows organisations to join FoodResQ by providing important information.

Information Collected are:

- NGO Name
- Official Contact Details
- Registration Details
- Verification Information
- Location
- Food Receiving Capacity
- Login ID
- Password

Verification Flow

FoodResQ Web Platform

Future Technology Expansion

Future Improvements

Machine Learning

Real-Time Notifications

Map APIs

Mobile Application

Advanced Analytics

Future Improvements

The current FoodResQ Platform can be expanded with several additional features:

- Real-Time Notifications
- Live Map Integration
- Smart Matching (advanced Machine Learning)
- Dedicated Mobile Application
- Analytics Advancement

Our Vision

We have designed FoodResQ Platform in order to create a simple bridge between surplus food and people who need it.

Instead of wasting safe surplus food, we want to make it easier to Report, Match and Redistribute and feed the needy ones.

Our Motto is:

Share Food, Serve Humanity, Share Hope!

•

What's Next for FoodResQ?

Real-Time Notifications

SMS, email or push notifications for urgent food availability.

Live Map Integration

Interactive maps showing food providers and verified NGOs.

Smart Matching

Machine Learning can help identify suitable recipients based on:

Previous claims

Food quantity

Distance

Recipient capacity

Pick-up success rate

Mobile Application

Dedicated Android and iOS applications.

Advanced Analytics

Track:

Food distributed

Food waste prevented

NGO participation

Donor participation

Thank
you
